Total Semesters Total ECTS Credits Total Workload (h) 6 180 see §4 BPO Maschinenbau (examination regulations) 5400

Module	Abbr.	Description		Workload (h)	Semester	Туре	h/week
Mathematics I	MA1	Functions and equations, differential and integral calculus, vector analysis	10	300	1st	required	8
Mathematics II	MA2	Analytic geometry, matrix calculus (linear equation systems, eigenvalues and eigenvectors, rotation matrix), partial derivatives and multiple integrals, scalar and vector fields, differential equations, Laplace transformation, statistics	5	150	2nd	required	4
Physics	PH	Mechanics (kinematics and kinetics of particles, work and energy), elektromagnetism, mechanical and electrical vibrations, waves, optics	10	300	1st & 2nd	required	8
Computer Science	IN	Web technologies, spreadsheets, microcontrollers, databases, programming in Java	10	300	1st & 2nd	required	8
Engineering Mechanics	TM	Statics (statics of ridgid bodies, plane truss, statically determined and indeterminate systems,	10	300	131 & 2110	required	-
Engineering Mechanics	1101	center of gravity, static friction, internal forces and moments), solid mechanics (stress and					
		strain, equilibrium, Hooke's law, principal stresses, Mohr's circle, bending of beams, torsion,					
		failure theories), kinematics and kinetics (particles and rigid bodies, plane motion and Euler's					
		formula, mass and acceleration, linear and angular momentum, work, power, energy)	9	270	1st & 2nd	required	8
Foundations of Material Science	CW	Solid state chemistry and physics, basic principles of physical, inorganic and organic chemistry				required	
Electrical Engineering	ET	Fundamentals of direct and alternating current, complex AC calculations, 3-phase systems,	8	240	1st & 2nd	required	8
	KL	semi conductors Technical drawings, machine components, systematic approach, principles of embodiment	4	120	2nd	required	4
Engineering Design		design, embodiment calculation	8	240	2nd & 3rd	required	8
Programming Techniques	PT	Object orientied programming, inheritance, recursion, multithreading, GUI programming, datastructures, complexity	4	120	3rd	required (I)	4
Engineering Mechanics II	MV	Stress and deformations, failure theories, elastic energy, FEM, vibrations	4	120	3rd	required (F, K)	4
Engineering Materials	WM	Steel and wrought iron, aluminium-, nickel- and copper-based alloys, ceramics, polymers	4	120	3rd	required (F, K)	4
Operating Systems and	BM	Architectures, resource management, communications, microprocessors and microcontrollers	<u> </u>				
Microprocessor Technology	""		4	120	3rd	required (I)	4
Measuring and Control Technology	MSR	Measuring and instrumentation engineering, binary data processing, switching functions, logic		0	510		
Thermo Dynamics and Fluid	TF	recently and international engineering, which you are processing, which ing transfers, logic controls with memory facilities, control circuit components, transfer elements, mathematical parametric models, Laplace transformation, transfer function, stability Fundamentals, first and second law of thermodynamics, power cycles with gasses, power and	10	300	3rd & 4th	required	8
Dynamics	115	refrigeration vapour cycles, gas mixtures, gas-vapour mixtures, flow processes (nozzle flow), introduction to fluid dynamics, hydrostatics, aerostatics, conservation laws, fluid element theory, boundary layer theory, pipe flow, external flows, flow of incompressible and					
	ļ	compressible fluids	10	300	3rd & 4th	required	8
Business Management	MA	Company organisation, investment and costing, project management, Six Sigma, business	_	070	0-4 0 445		
Histor Francisco Brains	10.7	studies	9	270	3rd & 4th	required	8
Higher Engineering Design	KV	Strengh calculation, bolted connections, axles and shafts, gearing, welding connections	5	150	4th	required (K)	4
English	EN	Professional English, communication competency, technical terminology	5	150	4th	required	4
Production Technology I	FV1	Fundamentals of cutting, machining processes, electrochemical machining, electrical discharge machining	4	120	4th	required	4
Manufacturing Systems	FS	Manual and computerized programming of NC-controlled manufacturing systems and handling systems, drive systems, machine elements of machine tools, static, dynamic and thermal loads, calculation and design, classification and construction of metal-cutting machine tools					
		-	9	270	4th & 5th	required (F, I)	8
Internship	PP	Industry internship, report and presentation	14	420	4th & 5th	required	1
Production Technology II	FV2	Metal casting, powder processing, forging and drawing of metals, sheet metal forming					
		processes	4	120	5th	required (F, K)	4
Production Planning and Control	APS	Operations planning, principles of shop-floor control, PPC systems	8	240	5th	required (F, I)	8
Product Engineering and	PKS	Development planning and realization, design systems, application of methods, cost-efficient					
Construction Systematics	DNI	design	4	120	5th	required (K)	4
Computer Networks	RN	Network programming, OSI model, protocol stacks, TCP/IP networks, transmission media, network services, case Studies (Linux, Windows, Mac OS X)	4	120	5th	required (I)	4
Energy Conversion Machines	EWM	Function, calculation and design of piston pumps and compressors, basics of turbomachinery, design of pumps and turbines, moving and stationary blades, cavitation, similarity laws,					
		operating curves of pumps	8	240	5th & 6th	required (K)	8
Drive Engineering	AT		8	240	5th & 6th		8
Drive Engineering		Systematics and analysis of mechanisms	<u> </u>	240	301 & 001	required (K)	- 0
Industrial Automation	FA	digital information processing, programmable logic control (PLC), numerical control (NC), assembly and manufacturing transfer lines, circular assembly and amnufacturing systems, robots and handling systems, computer integrated manufacturing (CIM), bus systems, communication	4	120	6th	required (F, I)	4
Production Technology III	FV3	Technical bases and terms, welding, brazing, adhesive bonding, thermal cutting	4	120	6th	required (F)	4
Quality Management	QM	Quality management systems, statistical methods, statistical process control, engineering					
		methology	5	150	6th	required	4
Databases	DB	Data models, relational algebra, transactions, SQL	4	120	6th	required (I)	4
Bachelor Thesis	BA	Final thesis	11	330	6th	required	
Colloquium	KOL	Presentation of bachelor thesis, exam on thesis topics	3	90	6th	required	
Tribology	TR	Analysis of tribosystems, friction and wear, lubricants, lubrication conditions and service life	4	120	5th	elective	4
Professional Studies	SW	Literature search, citations, rhetorics, communication, self marketing, creativity techniques, conflict and stress handling	2	60	5th	elective	2
Computer Aided Fluid Dynamics	CFD	Character of fluid flows, conservation laws, types of fluid flows, solution methods, boundary conditions, design of calculation mesh, turbulence	4	120	5th	elective	4
Computer / laca / lala Dynamics		Basics of computer aided design, virtualising of product development, basic handling of a 3D			5th	elective	4
	CAD						-
3D CAD	OM	CAD system LASER, interferometrical measuring techniques, digital image processing, 3D coordinate	4	120			4
3D CAD Optical Measuring Technique	OM	CAD system LASER, interferometrical measuring techniques, digital image processing, 3D coordinate recording, industrial applications	4	120	5th	elective	4
3D CAD Optical Measuring Technique Combustion Engines	OM	CAD system LASER, interferometrical measuring techniques, digital image processing, 3D coordinate recording, industrial applications Function, calculation and design of Otto and Diesel engines					4
3D CAD Optical Measuring Technique Combustion Engines Industrial Information Systems /	OM	CAD system LASER, interferometrical measuring techniques, digital image processing, 3D coordinate recording, industrial applications Function, calculation and design of Otto and Diesel engines Types of system, system integration, data interchange Families of materials: Selected steel types, high-temperature alloys, ceramic, carbon and	4	120	5th	elective	
3D CAD Optical Measuring Technique Combustion Engines Industrial Information Systems / Integration Specialities of Material Science	OM VM IIS SWK	CAD system LASER, interferometrical measuring techniques, digital image processing, 3D coordinate recording, industrial applications Function, calculation and design of Otto and Diesel engines Types of system, system integration, data interchange Families of materials: Selected steel types, high-temperature alloys, ceramic, carbon and composite materials; Corrosion: electro-chemical basics, occurrence and inspection; Testing of materials: scanning electron microscopy, X-ray diffractometry, measuring of eigen stresses	4 4	120 120	5th 5th	elective elective	4
3D CAD Optical Measuring Technique Combustion Engines Industrial Information Systems / Integration Specialities of Material Science Finite Element Method	OM VM IIS SWK	CAD system LASER, interferometrical measuring techniques, digital image processing, 3D coordinate recording, industrial applications Function, calculation and design of Otto and Diesel engines Types of system, system integration, data interchange Families of materials: Selected steel types, high-temperature alloys, ceramic, carbon and composite materials: Corrosion: electro-chemical basics, occurrence and inspection; Testing of materials: scanning electron microscopy, X-ray diffractometry, measuring of eigen stresses Principle of virtual work, Castigliano's theorem, Ritz method, finite element method	4 4	120 120 120	5th 5th 5th	elective elective	4
3D CAD Optical Measuring Technique Combustion Engines Industrial Information Systems / Integration Specialities of Material Science Finite Element Method	OM VM IIS SWK	CAD system LASER, interferometrical measuring techniques, digital image processing, 3D coordinate recording, industrial applications Function, calculation and design of Otto and Diesel engines Types of system, system integration, data interchange Families of materials: Selected steel types, high-temperature alloys, ceramic, carbon and composite materials; Corrosion: electro-chemical basics, occurrence and inspection; Testing of materials: scanning electron microscopy, X-ray diffractometry, measuring of eigen stresses Principle of virtual work, Castigliano's theorem, Ritz method, finite element method Software requirements, models and phases of software engineering, design patterns, CASE	4 4 4	120 120 120 120	5th 5th 5th 5th	elective elective elective elective elective	4 4 4
3D CAD Optical Measuring Technique Combustion Engines Industrial Information Systems / Integration Specialities of Material Science Finite Element Method Software Engineering	OM VM IIS SWK FEM SE	CAD system LASER, interferometrical measuring techniques, digital image processing, 3D coordinate recording, industrial applications Function, calculation and design of Otto and Diesel engines Types of system, system integration, data interchange Families of materials: Selected steel types, high-temperature alloys, ceramic, carbon and composite materials; Corrosion: electro-chemical basics, occurrence and inspection; Testing of materials canning electron microscopy, X-ray diffractometry, measuring of eigen stresses Principle of virtual work, Castigliano's theorem, Ritz method, finite element method Software requirements, models and phases of software engineering, design patterns, CASE tools, object-oriented design	4 4 4 4	120 120 120 120 120	5th 5th 5th 5th 6th	elective elective elective elective elective elective	4 4 4
3D CAD Optical Measuring Technique Combustion Engines Industrial Information Systems / Integration Specialities of Material Science Finite Element Method Software Engineering Higher Engineering Mechanics	OM VM IIS SWK FEM SE HTM	CAD system LASER, interferometrical measuring techniques, digital image processing, 3D coordinate recording, industrial applications Function, calculation and design of Otto and Diesel engines Types of system, system integration, data interchange Families of materials: Selected steel types, high-temperature alloys, ceramic, carbon and composite materials: Corrosion: electro-chemical basics, occurrence and inspection; Testing of materials: scanning electron microscopy, X-ray diffractometry, measuring of eigen stresses Principle of virtual work, Castigliano's theorem, Ritz method, finite element method Software requirements, models and phases of software engineering, design patterns, CASE tools, object-oriented design Machine dynamics, vibration, damping	4 4 4	120 120 120 120	5th 5th 5th 5th	elective elective elective elective elective	4 4 4
3D CAD Optical Measuring Technique Combustion Engines Industrial Information Systems / Integration Specialities of Material Science Finite Element Method Software Engineering	OM VM IIS SWK FEM SE	CAD system LASER, interferometrical measuring techniques, digital image processing, 3D coordinate recording, industrial applications Function, calculation and design of Otto and Diesel engines Types of system, system integration, data interchange Families of materials: Selected steel types, high-temperature alloys, ceramic, carbon and composite materials; Corrosion: electro-chemical basics, occurrence and inspection; Testing of materials canning electron microscopy, X-ray diffractometry, measuring of eigen stresses Principle of virtual work, Castigliano's theorem, Ritz method, finite element method Software requirements, models and phases of software engineering, design patterns, CASE tools, object-oriented design	4 4 4 4	120 120 120 120 120	5th 5th 5th 5th 6th	elective elective elective elective elective elective	4 4 4
